

Отчет Степановой Анны

Код приложения app.py

```
root@s1665817:~/ping-pong-app# cat app.py
import os
from flask import Flask, jsonify

PORT = int(os.environ.get('APP_PORT', 5000))
PONG_MESSAGE = os.environ.get('PONG_MESSAGE', 'pong')

app = Flask(__name__)

@app.route('/')
def root():
    return jsonify({
        'message': 'Привет! Используй /ping для проверки',
        'endpoints': {
            '/ping': 'возвращает PONG_MESSAGE',
            '/health': 'проверка здоровья'
        }
    })

@app.route('/ping')
def ping():
    return jsonify({
        'status': 'ok',
        'response': PONG_MESSAGE,
        'port': PORT
    })

@app.route('/health')
def health():
    return jsonify({'status': 'healthy', 'port': PORT})

if __name__ == '__main__':
    app.run(host='0.0.0.0', port=PORT, debug=False)

Ответ pong-from-instance-1 и pong-from-instance-2

```
root@s1665817:~/ping-pong-app# curl http://localhost:5001/ping
{"port":5000,"response":"pong-from-instance-1","status":"ok"}
root@s1665817:~/ping-pong-app# curl http://localhost:5002/ping
{"port":5000,"response":"pong-from-instance-2","status":"ok"}
root@s1665817:~/ping-pong-app# |
```

JSON-ответ

The image shows two screenshots of a web browser window. The top screenshot shows a GET request to `188.127.240.135:5001/ping` with a response of `{"port":5000,"response":"pong-from-instance-1","status":"ok"}`. The bottom screenshot shows a GET request to `188.127.240.135:5002/ping` with a response of `{"port":5000,"response":"pong-from-instance-2","status":"ok"}`. Both screenshots show a browser interface with a back button, a search icon, a refresh icon, a security warning "Не защищено" (Not secure), and a list of bookmarks including "Закладки Microsoft", "Files · master · Сте", "Stepanova-Anna/F", "Markdown Cheat S", and "tgboott — API-шл".
